In the method of making a pin stump insert, the remaining extragingival part of the tooth is prepared, a standard plastic pin fitted and retention points formed on the extragingival part of the pin, and then retraction of the gum is performed and a cast is taken in such a way that the pin is left in the cast.

ADVANTAGE - This method of making a pin stump insert increases the firmness of fixation of the insert. Bul.6/15.2.89 (2pp Dwg.No.0/0)
